Introduction and Purpose:
Reporting of student and/or PSI Educator injury in a practice education environment is important for immediate and follow-up care and insurance coverage if necessary. Additionally, tracking the nature of injuries identifies hazards and informs the need for change to promote a safe practice environment.

The purpose of this guideline is to outline immediate response actions to student or PSI Educator injury or exposure to blood and body fluids (BBF) experienced in the practice education setting and the necessary reporting and follow-up requirements. Roles and responsibilities for are outlined for all partners in to ensure complete, timely, accurate documentation that may occur during the practice education experience.

Definitions:
Also refer to: Standardized Guideline definitions in Practice Education Guideline (PEG) Introductory Module.

Blood and Body Fluid Exposure: an event where blood or other potentially infectious body fluid comes into contact with skin, mucous membranes (permucosal) or subcutaneous tissue (via percutaneous injury)\(^1\).

Skin Exposure (non-intact): blood or body fluid comes into contact with a wound less than 3 days old or with skin that has compromised integrity (i.e. dermatitis, scratches, burns)\(^2\).

Skin Exposure (intact): a LARGE amount of blood or body fluid comes in contact with intact skin for a PROLONGED period of time\(^3\).

Permucosal Exposure: blood or body fluid from one person is introduced into the bloodstream through permucosal contact (i.e. contact with mucous membranes lining body cavities such as eyes, nose, mouth, vagina, rectum and urethra)\(^4\).

Percutaneous Exposure: blood or body fluid from one person is potentially introduced into the bloodstream of another person through the skin via needle stick, tattooing, body piercing, electrolysis, acupuncture or other sharps injury\(^5\).

Practice Guideline Standards:
Response ~ Medical Care:
In the event of student or PSI Educator injury within the HCO, the individual should seek appropriate medical care from the HCO First Aid Attendant, Emergency Department, PSI medical services or family doctor.

In the event of student or PSI Educator exposure to blood and body fluids (BBF), the individual must:
- take immediate care of self by flushing mucous membranes with water or normal saline, wash skin with soap and water (no other products) and be directed to not promote bleeding by

\(^2\) Ibid.

\(^3\) Ibid.

\(^4\) Ibid.

\(^5\) Ibid.
cutting, scratching, squeezing or puncturing the skin.
- seek immediate medical care within 2 hours of exposure in an emergency department or medical stations where prophylactic treatment for HIV can begin as soon as possible, in accordance with the HCO protocols for BBF Exposure (See Appendix A: Sample: Blood and Body Fluid Exposure Protocol).

**Reporting:**
The student and/or PSI Educator must report the injury or BBF exposure to their Post Secondary Institution.

The student and/or PSI Educator must inform the HCO unit manager/director of the injury or BBF exposure.

The PSI is responsible to submit the appropriate documentation to the designated accidental injury and disability insurer (eg: WorkSafeBC or private insurer);

A student or PSI Educator exposed to potentially infectious blood or body fluids must complete specific reporting documents (See Appendix B: Guidelines for completing HLTH 2339 and 2340 forms)

HCOs must communicate any additional health authority specific reporting requirements for injury or BBF exposure to PSIs.

**Roles, Responsibilities and Expectations:**

**Student:**
For personal injury (other than BBF):
- Seek appropriate medical care from HCO First Aid Attendant, Emergency Department, PSI medical services or family doctor.
- Promptly report injury to Post Secondary Institution. Complete required injury documentation forms as directed by PSI (includes WorkSafeBC documents).
- Inform HCO Unit Manager/Director of injury.

For personal injury involving BBF:
- Take immediate self care as outlined in the guideline standards.
- Seek immediate medical care within 2 hours of exposure in an emergency department or medical station where prophylactic treatment for HIV can begin as soon as possible, in accordance with the HCO protocols for BBF Exposure (See Appendix A: Sample: Blood and Body Fluid Exposure Protocol).
- Complete required forms for BBF Exposure. See Appendix B: Guidelines for completing HLTH 2339 and 2340 forms.
- Promptly report the exposure to the Post Secondary Institution. Complete required PSI reporting forms.
- Inform HCO Unit Manager / Director of exposure.
- Complete any required HCO specific reporting requirements.

**PSI Educator:**
In the event of an injury or BBF exposure to the PSI Educator, follow the same protocol as outlined above for students.
In the event of a student injury or BBF exposure under your supervision in the practice setting:

- Provide assistance to the student to seek appropriate medical care in response to the injury or BBF exposure as outlined above under student responsibilities.
- Provide support to the student to complete all necessary reporting processes and forms.

HCO Educator (term includes all practice education supervisory roles):
In the event of a student injury or BBF exposure under your supervision in the practice setting:

- Provide assistance to the student to seek appropriate medical care in response to the injury or BBF exposure as outlined above under student responsibilities.
- Provide support to the student to complete necessary reporting processes and forms.
- Inform the HCO Unit Manager/Director of injury or BBF exposure.

Post Secondary Institution:
Have appropriate accidental injury and disability insurance coverage for students and PSI Educators learning/supervising in the practice education setting, as per the educational affiliation agreement6.

Establish and communicate a policy/process for student and PSI Educator injury or BBF exposure reporting.

Ensure all required documentation is complete and submitted in accordance with the PSI, WorkSafeBC, Accidental Injury and Disability Insurer policies/protocols.

Maintain database of reported injuries. Monitor the type and frequency of incidents that occur during practice education experiences in order to identify, analyze, and take action for correction and prevention of similar events in future.

Health Care Organization:
Provide immediate response medical care for student or PSI Educator injury or BBF exposure as required through on site First Aid Attendant or Emergency Department.

Maintain record/track student or PSI Educator injury or BBF exposures as reported to the HCO Unit/Department Manager or Director, or other HCO specific reporting mechanisms, by the student or PSI Educator at the time of the event, in accordance with HCO specific reporting protocols.

Integrated Guidelines for Student Practice Education
Appendix A:

Sample: Blood/Body Fluid (BBF) Exposure Protocol for Students

Student (Exposed Person)
- Cleanse affected area per Health Care Organization (HCO) BBF protocol
- Contact First Aid Attendant as per site protocol
- Report to faculty and/or staff supervisor

Faculty/Supervisor (of Student)
- Assist in completing HLTH 2339 and escort to Emergency (if needed)
- (Faculty) Supply and assist in completing School Incident/Injury report and return it to the school

Emergency Triage/RN
- Ensure source consent and blood work obtained
- Refer to Emergency Physician

Emergency Physician
- Assist student to complete HLTH forms if not already done so (see Appendix B)
- Order appropriate blood work

Unit RN
- Complete "Source Person" section of HLTH 2339
- Give medications and immunizations as ordered

Occupational Health (RA)
- Counsel and answer questions

Flowchart adapted from Fraser Health Authority BBF Exposure Protocol for Staff, January 2004.

HLTH 2339 – Management of Percutaneous or Permucosal Exposure to Blood & Body Fluid/Laboratory Requisition (Ministry of Health Services, 2005/04/12)

HLTH 2340 – Management of Percutaneous or Permucosal Exposure to Blood & Body Fluid: Letter for Follow-Up Physician (Ministry of Health Services, 2004/08/20)

Give student on discharge:
- HLTH 2339 (Pink copy)
- HLTH 2340 (White copy)

Distribute copies of HLTH 2339 & 2340 accordingly (see Appendix B)

Send follow up letter to student (see Appendix C)

Integrated Guidelines for Student Practice Education
Appendix B

Guidelines for completing HLTH 2339 and 2340 forms
Student (or Faculty) BBF Exposure

HLTH 2339

Enter School and Program name (not health authority or worksite name)

Enter “Student discipline”

Enter Faculty supervisor’s or school’s phone number

HLTH 2340

Give Student White copy to take to follow up appointments
Send Yellow copy to health authority or worksite Occupational Health

*NOTE: At no time is Source Person information to be released to either the student or the school
